Custom Shop Services

Custom Forearm Stock Modifications	
Polymer	\$ 75.00
Wood	\$ 125.00

Service Descriptions:

Custom Trigger: Depending on the trigger group or parts to be installed there will be a series of activities including; detailed disassembly of the firearm, inspection of new parts with polishing and modification as required for proper fitting to reduce/eliminate trigger creep and adjustment of trigger pull.

Barrel Fitting/replacement: The receiver and barrel group will be disassembled and inspected in preparation for adjustment, tuning and fitting of the barrel for increased accuracy and performance.

Barrel Threading: The barrel, regardless of style and design will be properly threaded for the client requested thread per inch (TPI) requirements. NOTE: Barrels with patterns such as 1/2, 28 cannot be re-threaded to a larger thread pattern such as 5/8, 24 without cutting the barrel. Barrels that require upward changes in TPI will require barrels to be cut just below the existing thread pattern before being refitted to the new pattern.

Jeweling Services: Engine turning better known as "Jeweling" of firearms parts requires the use of specialized tools and abrasives to create "artistic" or geometric patterns in the metal.

Laser Engraving: Our laser engraving processes can be applied to any firearm surface. We can engrave logos, phrases and just about any other design you desire.

Custom Forearm Stock Modifications: We specialize in modifying polymer and wood forearms for rifles and shotguns to accept Picatinny rails and attachments.

Other Services: If you don't see what you need please call and ask. We are a full service shop (847) 341-4913.
